TO BE USED ON AUDITS OF NANDTB's

1.0 SCOPE

The purpose of this Audit Criteria is to provide a means to verify and document that systems are in place to ensure that National Aerospace NDT Boards are operated in accordance with EN4179 / NAS410, ANDTBF/08 and procedures that have been established to control the board. If non-compliance is identified the auditor will formally record non-conformances. In order to obtain and maintain approval as a Board all non-conformance must be addressed.

2.2 Instructions to Auditors

In completing this assessment, auditors are instructed to respond with a "Yes" or "No" to address compliance with each statement of requirement. For any negative responses, the auditor must clearly indicate in the NCR if the "No" reflects noncompliance with respect to existence, adequacy, and/or compliance. Existence relates to evidence of a documented procedure or policy, adequacy relates to the completeness of the procedure or policy, and compliance relates to evidence of effective implementation. This checklist includes the use of the word "shall" which indicates a clear requirement that must be met at all times. The word "may" indicates a possible resolution to a requirement or one recommended method to achieve a given requirement, but does not

represent the only way to meet that requirement. In addition, the checklist includes the term “Compliance Assessment Guidance”.

This term is used to reflect the expectation when answering the checklist question as YES or NA. The auditor must verify the list of procedures provided by the Board at the time of the audit. Any corrections or updates to the list must be identified using notes, inserted at the applicable criterion.

All negative responses require a Non-conformance Report (NCR). Not applicable (NA) responses do not require an explanation unless otherwise noted. There is only one plausible reason for an NA, which is, that a particular operation or issue is not being employed. There are no NA's simply for a lack of a requirement. If a system is in use, then all questions pertaining to that system are applicable. If verification of results require documentation it shall be so noted in this checklist.

The audit results shall not include any proprietary information. Technical information on parts which have been designated “Export Controlled – License Required” (EC-LR) should not be recorded. If auditors have any questions about this, they should contact the organization managing this audit.

The evidence, e.g. procedure reference, document reference, website address etc. that supports the response shall be captured in the ‘Evidenced by’ box.

2.3

Instructions to the Board

It is recommended that prior to the audit each Board should complete a self-audit and all internally identified non-conformances should be corrected prior to the actual audit. Non-conformances which could have an impact on existing personnel approval/certification may require a follow up audit to verify that any corrective action has been implemented and is effective.

Following the audit any non-conformance(s) will be agreed by the representative of the board and the auditor. The board has 21 calendar days from the issue of any non-conformance report to submit a closed out non-conformance or provide a corrective action plan. The close out of the non-conformance shall include but not be limited to:

- 1.Root cause analysis.
- 2.Immediate corrective action to resolve the discrepancy.
- 3.Actions taken to preclude recurrence.
- 4.Any relevant documentation to support the close out of the non-conformance.
