

Aircraft Propellers

- Reports of near-misses and accidents remind us all of the dangers associated with aircraft propellers.
- Pilots should ensure that passengers or other people don't get injured by a propeller on an aircraft.
- Avoid manoeuvring your aircraft on the ground by pulling or pushing the propeller – use a towbar.

PRACTICE PROP SAFETY – When in the vicinity of a propeller, assume that the engine can start at any moment.

WARNING: Always treat any propeller as live and dangerous - Contact with propellers can cause serious injury or death

Remember – Before Starting your Engine - ALWAYS shout “Clear Prop!”
