

Sky Lanterns are often launched on social occasions such as weddings, birthday parties, and other celebrations.

They are typically constructed from oiled rice paper on a bamboo frame and contain a small candle or fuel cell composed of a waxy flammable material. When lit, the flame heats the air inside the lantern, thus lowering its density causing the lantern to rise into the air. The Sky Lantern stays airborne while the flame is hot enough to adequately heat the air in the envelope, thereafter, the lantern floats back to the ground.

The Threat to Aircraft and Environment Safety

Sky lanterns vary in size and performance and when released can travel a considerable distance from the release point at unpredictable heights on prevailing winds. This unpredictability of flight could cause Sky Lanterns to become a risk to aviation through airborne engine ingestion. The level of risk associated with the release of sky lanterns is proportionate to the number and size of units released at any one time, and also to the location of the point of release.

While the risk of collision with an aircraft is small, aviation activity within the airspace of intended release needs to be considered when conducting an assessment for the releasing of any Sky Lanterns, in particular when within the vicinity of an airport.

Additional to the risk to aviation, Sky Lanterns may cause the deployment of the Coastguard on false rescue missions if they are mistaken for a distress signal (flare). They may also pose a risk such as a fire hazard to land and/or property or an ingestion hazard to animals.

Any person who wishes to use such devices should be aware that the Irish Aviation Authority (IAA) does NOT endorse or encourage the use of Sky Lanterns. Any person(s) responsible for launching Sky Lanterns should heed the guidelines set out in this Safety Leaflet in order to ensure the safety of air navigation and minimise the possibility of an unnecessary coast guard alert. Additionally, any person(s) choosing to launch Sky Lanterns should be aware that they may be liable for any resultant damage to people, property, or animals.

Further Information:

Dublin ATC: 01- 814 4601

Cork ATC: 021 431 6389

Shannon ATC: 061- 770700

Irish Coast Guard: 01 678 3454

The following IAA Guidelines are set out for the benefit of those planning to release Sky Lanterns, and for Air Traffic Control and airport managers to increase awareness and to minimise the potential risk of damage to persons, animals, property or aircraft.

The Guidelines

The following Guidelines should be observed by the Event Organiser (EO) and/or the person responsible for the release of Sky Lanterns:er Regulations including local by-laws and fire regulations may apply.

- 1.Sky Lanterns should not be released within ten nautical miles of an active airport.
- 2.Sky Lanterns should not be tied together.
- 3.The responsible person should obtain a written landowner's permission for the release of any Sky Lanterns.
- 4.Never release more than 20 Sky Lanterns in a single launch.
- 5.Wind conditions should be calm to limit the travel of the Sky Lantern and to facilitate the retrieval of all the device debris that returns to ground.
- 6.No metal tags or any other item which could be expected to cause damage to turbofan/jet engines should be attached to the Sky Lanterns.
- 7.The EO and/or any other persons responsible for the launch must be mindful of all hazards close to the launch site such as trees, power lines, buildings (incl. farm buildings and sheds) and must pay particular attention to all other environmental factors near the launch site including crop fields, livestock, other habitation, and the proximity to airfields.
- 8.Before using Sky Lanterns always read their Safety Instructions.
- 9.If the Sky Lantern release is planned to take place on or near the coast, the EO or responsible person(s) should pass all the relevant details to their local Coastguard prior to the event.
- 10.It is the responsibility of the EO and / or the person(s) responsible for releasing a Sky Lantern to inform any other State agency or effected parties including the Gardaí, the Fire or Forest Service etc. as may be deemed necessary by the person launching the Sky Lanterns for safety reasons.
- 11.Be Aware: Other Regulations including local by-laws and fire regulations may apply.
